Arpit Rajput - Coding Notes

Core Engineering Habits

- Start by making the data model clear.
- Keep API contracts boring, documented, and predictable.
- Validate requests at the boundary.
- Prefer readable code over clever code.
- Add tests around business rules, auth checks, and data transformations.

Backend Checklist

- Use structured request validation.
- Centralize error handling.
- Keep auth and authorization separate.
- Add health checks for deployment.
- Log operational events without leaking sensitive data.

Frontend Checklist

- Keep components focused on one responsibility.
- Prefer accessible semantic HTML.
- Optimize images and avoid layout shift.
- Test critical flows across mobile and desktop.

Deployment Checklist

- Use environment variables for secrets.
- Run build, test, and lint checks in CI.
- Keep Docker images small.
- Document rollback steps.
